REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: no prior art teaches or fairly suggests synthesizing polyglutamine repeat aggregates filament by chemical approaches and freezing methods. The instant synthesized polyglutamine filaments have a diameter between 1 nm and less than 5 nm and a length between 20-100 nm distinguishing from prior arts. The closest prior art is the article of Scherzinger et al. (Cell 1997 Vol. 90: 549-558) where Scherzinger et al. using recombinant methodology, not chemical approach, to produce a fusion protein containing glutathione S-transferase and exon 1 of the Huntington's disease polyglutamine repeats. However, filaments generated from Scherzinger et al. having diameter from 5-10, and up to 250 length (page 552, right column). Furthermore, the morphological resemblance filaments of Scherzinger's do not completely correlate with the natural polyglutamine disease state.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
